**National Patient Care Database
Transmission Reports
PIMS Events Transmitted Yesterday**

Introduction

This option is used to generate a report of all PIMS events that were transmitted to the National Patient Care Database yesterday.

The Austin Automation Center (AAC) will be sending daily reports to the medical centers listing what transmissions they have received. The medical center can then use this report to verify that the number sent was the same as that received by the AAC.

The only prompt is for a device.

Example

```
HL7 MESSAGE TEXT STATISTICS          SEP 23, 1998 09:12      PAGE 1
-----
PIMS EVENTS DATED SEP 22, 1998
Admit a patient
SUBCOUNT 1
Discharge a patient
SUBCOUNT 1
COUNT     2
```

National Patient Care Database

Transmission Reports

PIMS Events Transmitted for Date Range

Introduction

This option is used to generate a report of all PIMS events transmitted to the NPCD for a selected date range. If this option has been previously utilized, the last date range that was selected will be displayed.

The Austin Automation Center (AAC) will be sending monthly reports to the medical centers listing what transmissions they have received. The medical center can then use this report to verify that the number they sent was the same as that received by the AAC.

Example

Select Transmission Reports Option: PIMS Events Transmitted for Date Range
START WITH PIMS EVENTS DATED: FIRST// 9 15 98 (SEP 15, 1998)
GO TO PIMS EVENTS DATED: LAST// 9 18 98 (SEP 18, 1998@24:00:00)
DEVICE: A100 RIGHT MARGIN: 80// <RET>

**National Patient Care Database
Transmission Utilities
Retransmit Patient Demographics**

Introduction

This option is used to retransmit demographic data for a selected patient.

The Austin Automation Center (AAC) will be sending reports to the medical centers listing rejects. For rejects that pertain to a patient's demographic data, the medical center can use this option to resend the data to the AAC.

There exists a background job scheduled to run periodically throughout the day that builds HL7 demographic messages. This background job will generate this HL7 message during its next run.

The Transmission Utilities Menu is locked with the DG PTFTRANS security key.

Example

```
Select PATIENT NAME: PARKER,MARY 01-01-11 506010111 YES SC VETERAN
```

```
Demographic data queued for transmission
```

**National Patient Care Database
Transmission Utilities
Retransmit Admission Data**

Introduction

This option is used to retransmit admission data/history for a selected patient and admission. This data includes admission, discharge, and all transfers. Only patients with an admission on file can be selected.

The Austin Automation Center (AAC) will be sending daily reports to the medical centers listing what transmissions they have received. The medical center can compare this with their G&L to verify that all admissions, discharges, and transfers had been received. This option would be used to reconcile any discrepancies that may be found.

The display begins with a default date range of T-45 through today. You may change the date range; however, it may not exceed 366 days. The display lists all admissions for the selected patient that occurred in the given timeframe. If you select a new patient, the currently selected timeframe will be used.

The Transmission Utilities Menu is locked with the DG PTFTRANS security key.

Example

Select PATIENT NAME: PARKER,MARY 01-01-11 906010111 YES SC VETERAN

<u>Admission Transmission</u>		Sep 22, 1998 11:00:55	Page:	1 of 1

**National Patient Care Database
Transmission Utilities
Retransmit Entry in ADT/HL7 PIVOT File**

Introduction

This option is used to retransmit an entry in the ADT/HL7 PIVOT file (#391.71). Entries can be selected by date of event, pivot number, or patient name.

Event Types may include the following.

Inpatient Events	Admission (does not store individual transfers and discharges)
Updates to Data	Demographic changes
Registration Events	Registration
Treating Facility Updates	Treating facility transfer/update

The Transmission Utilities Menu is locked with the DG PTFTRANS security key.

Example

```
Select ADT/HL7 PIVOT DATE/TIME OF EVENT:  8/24/98
  1 8898  PAULSON,MELISSA    INPATIENT EVENTS
  2 8908  LEON,LAWRENCE     UPDATES TO DATA
  3 9434  PAULSON,MELISSA    INPATIENT EVENTS
CHOOSE 1-3: 1  8898  PAULSON,MELISSA  INPATIENT EVENTS
